

ECODORA LINE

The elegant way of expressing your own style.

ECODORA DOOR PANELS

The entrance door showcases your home and leaves a first impression of the house and its residents. It welcomes not only your guests, but also gives your home individuality and a personality. Various designs, colours, handles and glasses provide for numerous options to choose from, giving you the freedom to design your home to your preferences. It's quite simple: With the right front door you can express your own style.

But it is not only the look that counts, the inner values of a front door are also enormously important. In addition to the high-quality foam core for perfect thermal efficiency, our patented ESC (elastic sandwich compound) concept ensures that your front door withstands extreme temperatures and opens and closes smoothly at any time.

Discover our designs, which take on many different architectural styles, and at the same time can be individually adapted to match your own creative ideas. Do you like it restrained or extraordinary? Let our examples inspire you, and use our front door configurator to create the front door of your dreams.

Do you like a specific model? The QR code on each page will take you directly to the configuration for this model.

Kindest regards

Your adeco Türfüllungstechnik GmbH

handle (semi-circular) matt brushed stainless steel or black Finea 370 with straight handle supports
 HA 312 length 1,040 mm
 HA 289 length 1,480 mm

GENERAL INFORMATION AND CARE

Thanks to its composition, stainless steel does not rust simply through contact with oxygen. Nevertheless, a rust film may form on the surface due to environmental conditions (air containing salt or iodine), contact with ferrous materials or other soiling. To protect the surface from soiling, we recommend regular cleaning of the stainless steel surfaces using a suitable standard cleaning agent. For reproduction and printing reasons, the representation of colours and stainless steel inlays of front door panels as well as handles is not binding.

For a perfect colour-coordination, we recommend using original RAL charts or adeco colour samples. The effects created by glazings and colours also depend on the actual lighting conditions, the time of day, the season and the place of installation.

The outer appearance of the front door changes if the size of the individual door deviates from the size of the front door shown in the catalogue. For more information, please ask your specialised dealer. Technical modifications reserved.

MORE COMFORT

The inner values of our aluminium attachment panels offer you double advantages. The patented ESC (elastic sandwich compound) concept ensures that your front door can also withstand extreme temperature effects. Whether in strong sunlight or sub-zero temperatures - the ESC concept significantly reduces the forces, and the door can be opened effortlessly.

MORE SAFETY

If you require additional protection against burglary, we recommend that you choose a front door panel offering resistance class RC2. Security glass and RC2 give you the good feeling of being safe and secure.

Our closed attachment panels are already supplied in RC2 security class as standard. Glazed panels achieve this resistance class, which is confirmed by the certified testing institute EPH, with an optionally available security glazing.

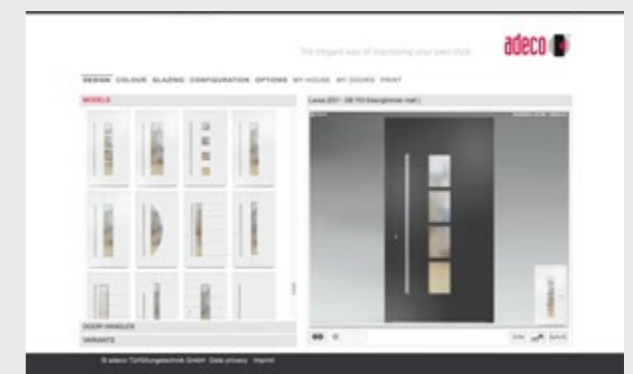

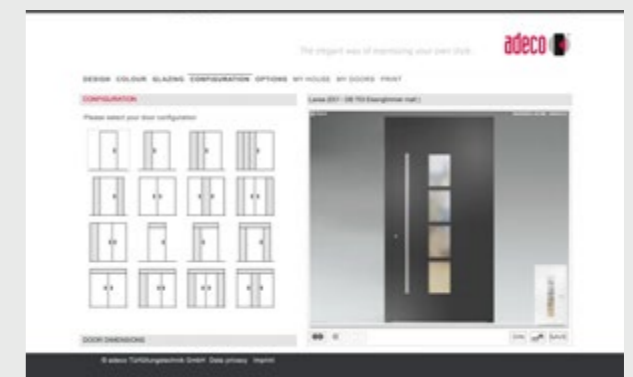

The P4A security glazing option is shown below in a double-sided attachment panel with ESC concept.

OUR CONFIGURATOR

You are still undecided which model suits your house best? You are still wavering about which surface is the right one? Perhaps you have already found your dream front door, but now you would like to see how it will look in your entrance? Redesign your entrance, become a designer yourself!

Visit the entrance door configurator on our website www.adeco.de/en. Combine individual surfaces, colours, glass, door handles and extras as you wish. We guide you through the configuration step by step. Play with the possibilities that open up to you. In just a few minutes you can create an almost realistic picture of your future entrance area.
